MISSION

Prepare leaders with ethical values to contribute to sustainable development and to construct a prosperous and just society.

VISION

Our actions are mission-driven to alleviate poverty, promote social justice and build a future where our communities achieve sustainable and shared prosperity.
Dear Friends and Supporters,

For a quarter century, EARTH University’s unique admissions program has sought out extraordinary youth from underprivileged communities in over 40 countries and given them the chance to learn and grow as professionals and, more importantly, as human beings with values and ethics.

The results of EARTH’s efforts are tangible and inspiring: a 2014 impact study funded by the Royal Norwegian Embassy in Guatemala found that our graduates in Guatemala, Honduras and Nicaragua are fulfilling the University’s mission by making a positive social, environmental and economic impact in their regions, with 97% of them returning to their countries of origin. From rural communities in South America to villages in Africa, our students and graduates are improving labor conditions, starting their own businesses, generating employment, defending biodiversity and promoting sustainable development practices every single day.

Their success - and indeed, EARTH’s success - all starts with you, our trusted friends. We know that you share our belief in education as the most powerful tool we have to illuminate lives, transform our society and protect our planet. With each one of you by our side throughout the years, more than 1,900 leaders of change have had the opportunity to earn an innovative, world-class education in agricultural science and today are illuminating lives around the world. For all this and more, we thank you.

This year I invite you to celebrate the impact that our extraordinary young people have already had, and at the same time, look forward to the exciting new opportunities that lay ahead on our path to a more just and prosperous future. There has never been a better time to be part of the EARTH community.

Regards,
José Zaglul

On September 23, President José Zaglul represented EARTH at the 2014 Clinton Global Initiative (CGI) Annual Meeting in New York City. At the 2013 CGI meeting, EARTH announced its Commitment to Action in the form of a feasibility study for an innovative Global Master’s in Health and Sustainable Development, together with the American University of Beirut and The MasterCard Foundation.

Dr. Zaglul was invited to participate in a prestigious event entitled “Pitching for Partnerships” where he presented EARTH’s Commitment to Action before a panel of experts with the goal of spreading awareness and identifying strategic partners for the program.
The Class of 2018 is EARTH’s most international class in history, representing 35 nations that include seven new countries: Belgium, Chile, Italy, Madagascar, Malawi, Nevis and Zambia.

- The vast majority of our students come from rural areas and **70% of them receive full scholarships** that include housing, meals, tuition and textbooks for all four years of study.
- For the second consecutive year, **40% of our scholars are female** which represents an important step towards reaching our goal of gender equality.
- **84% of students graduate in four or five years** - a significantly higher rate than most universities in the U.S. and around the world.
422 students from 43 countries in the Americas, Africa, the Caribbean and Europe

Student distribution by countries of origen 2015

422 students 40% women 43 countries
After graduating, Claudia Jerónimo (‘05, Guatemala) returned to her native country with a clear goal in mind: work tirelessly to address social issues in the rural and indigenous communities where she grew up. At the Fundacion Tierra Nuestra, Claudia works to empower women by facilitating trainings in food security, gender equality and entrepreneurship, giving them the tools they need to start their own projects, increase the family income and send their children to school. She says of her education, “It was an experience that changed my life.” Claudia remarks that EARTH’s “learning by doing” approach helped her become the self-motivated professional she is today: “The University isn’t trying to make you memorize and repeat lessons, instead they prepare people who are capable of improving things and looking for new information.”

“I think you need to perform actions that benefit as many people as possible, that’s one of the things that influences my work and helps to build fairer, more equitable and less violent societies,” reflects Claudia.
The study shows the impact that EARTH graduates have made in:

- NICARAGUA
- GUATEMALA
- HONDURAS

After interviewing 132 professionals, these were the results:

**ECONOMIC IMPACT:**
- 94% work in jobs related to what they studied at EARTH.
- 74% work in leadership positions.
- 92.7% have participated in initiatives that create jobs.
- 89.4% of women graduates are economically active.
- 77.4% contribute to raising the average income of rural families.
- 50% have created a new business at one time during their career.
- 17.8% work in their own business.

**SOCIAL IMPACT:**
- 85.5% encourage respect for cultural diversity.
- 84.7% promote social equality.
- 83.1% contribute to better labor conditions for employees.
- 77.2% promote community development.

**ENVIRONMENTAL IMPACT:**
- 7 out of 10 graduates report having worked in water, soil and waste management and biodiversity conservation.
- Between 30% and 50% of graduates promote reforestation and forestry.

1,931 GRADUATES FROM 32 COUNTRIES

4 out of 5 are working in their countries of origin

The Royal Norwegian Embassy in Guatemala funded a comprehensive study with the goal of measuring the social, environmental and economic impact of graduates in Guatemala, Honduras and Nicaragua who were given scholarships by the Norwegian government.

The study was carried out by the Research Institute for Development in Education, part of the Iberoamerican University in Mexico City.
Ana Quirós’s farm started over 20 years ago with little more than a crop of medicinal plants and a few cows. Slowly but surely, and with the help of EARTH students, Ana made her dream come true by converting her humble property into a tourist attraction and working farm. “EARTH students helped us change our lives, they trained us and worked with us out in the fields. They came every Wednesday, we developed a work plan, and over time we were able to integrate the farm. It was EARTH students who came up with the idea of selling medicinal soaps,” she explains. In the photo, Ana shows Luis Carazo of EARTH’s Community Development Program her line of natural products called Mizú (meaning “health” in Japanese) that she hand crafts in an on-site laboratory and sells to visiting tourists and researchers. In addition, she has a small restaurant that serves home-grown organic produce. “EARTH has taught and helped us so much, but now it’s our turn to lead. We have to make sure that we are improving every single day,” Ana concludes.
THE IMPACT OF AN EARTH EDUCATION …IN THE COMMUNITY

In 2014 alone, EARTH students and the Community Development Program (CDP) impacted more than 2,500 people in the nearby communities of Las Lomas, Verdetica and El Triunfo, with dozens of trainings in agricultural best practices, food processing and entrepreneurship. In addition, they installed 14 biodigesters that contain waste, decrease contamination of local water sources and produce clean, free gas for cooking and heating.

The University’s dedication to local communities is replicated in our graduates: 84% of them return to their countries of origin to fulfill their roles as leaders of change.

84% of graduates surveyed in 2014 reported having a direct and positive impact on social issues, primarily in:

- training farmers (57%)
- improving working conditions (47%)
- generating employment (45%)
- increased income for rural families (44%)
- project development (41%)

COMMUNITY DEVELOPMENT PROGRAM

EARTH’s Community Development Program (CDP) was created to give students the opportunity to gain hands-on experience in the field, apply theoretical concepts and develop the interpersonal communication skills that are essential for modern professionals.

Over the years, the CDP has transformed into a mutually beneficial bridge between the University and nearby communities, allowing students to contribute to sustainable development while learning from the experience and the wisdom of the producers themselves.
Did you know? In 2014...

Approximately 7,500 visitors were exposed to environmental stewardship and sustainability principles.

80% of the solid waste on campus was recycled.

More than 12 tons of organic waste were converted into organic fertilizer and applied to our on-campus crops, which are cooked and served daily at the University cafeteria.
EARTH’s Center for Research and Development in Renewable Energies (CIDER) is the largest and most advanced knowledge transfer center of its kind in Central America. Last year, CIDER provided trainings for nearly 400 farmers, community leaders and government decision makers from around the world.

Additionally, the University’s Carbon Neutral Unit carried out 17 trainings in carbon neutrality for over 250 students and verified six new organizations as C-neutral.

83% of EARTH graduates surveyed in 2014 report having a direct and positive impact on environmental issues, primarily in:

- soil conservation and management (52%)
- water conservation and management (40%)
- waste management (40%)
- conservation and biodiversity (39%)
- organic production (31%)

86% of EARTH graduates surveyed in 2014 report having had a direct and positive impact on the agricultural sector, primarily in:

- increasing efficiency in agricultural production (46%)
- promoting the rational use of agrochemicals (42%)
- soil nutrition and quality (31%)
- integrated pest management (30%)
- projects or actions that help mitigate climate change (26%)
Joaquín Viquez (‘07, Costa Rica) is the founder and owner of Viogaz, a business that designs and installs biodigesters (a technology that transforms human and animal waste into sustainable energy and treats waste water). Apart from promoting sustainable resource management, Joaquín is committed to making sure that the services his company provides “are accessible to businesses both large and small.” His company currently employs five people, including a fellow EARTH graduate, and has offered its services to more than 30 businesses and farmers in Costa Rica, Honduras, Guatemala and Nigeria.

The education Joaquín received at EARTH helped sharpen the technical and entrepreneurial skills he had developed while watching his parents run their own small business. It also imbued a large dose of social and environmental responsibility, notes Joaquin: “When you study at EARTH, there is this feeling that is always under the surface that is difficult to describe. It is a message that makes you want to create something and generate a positive impact in the lives of others, the community and the environment. It is what you think about every time you make a decision.”
Investing in one EARTH graduate creates nearly four jobs in the developing world.

20% of alumni have created their own or family business by their 15th class reunion.

Among graduates with their own or family business, 77% report that they have created jobs.

84% of graduates surveyed in 2014 report having a direct and positive impact on the business sector, primarily in:

- development of new projects (50%)
- administrative improvements for increased profits (41%)
- diversification of activities (36%)
- development of innovative ventures (35%)
- development of value-added chains (28%)

Our graduates have told us time and again that EARTH’s Entrepreneurial Projects Program is one of the most valuable components of our innovative curriculum - and with good reason. **EARTH is the only university in the world** that requires each and every student to plan, operate and close a real business venture, all while maintaining the highest standard of ethical best practices.

This incredibly dynamic learning experience helps to fuel our alumni’s entrepreneurial spirit.
GREENOVATORS

From November 12-13, 2014, EARTH University hosted the 16 finalists of Greenovators, a contest developed with the Inter-American Development Bank (IDB) dedicated to finding worthy ideas and projects from young innovators that mitigate or adapt to climate change. The winners were recognized in an awards ceremony held on campus that was attended by the First Lady of Costa Rica Mercedes Peñas, Spanish Secretary of State Jesús Gracias, IDB representative Rodrigo Parot and representatives from the Ibero-American Youth Organization and the United Nations Educational, Scientific and Cultural Organization (UNESCO), among others.

The finalists are from Argentina, Belize, Bolivia, Brazil, Chile, Colombia, Costa Rica, Ecuador, Guatemala, Mexico and Nicaragua and received seed money to implement and/or expand upon their innovative projects in environmental education and awareness, sustainable business, resilient agriculture, renewable energy, energy efficiency and water resource management.

The Greenovator contest is part of the ECOIN initiative, an intergenerational environmental stewardship conference that convenes youth and world leaders to discuss and find solutions to combat climate change. ECOIN will be held on EARTH’s campus in 2015.
“Right now I have a job, thanks to the University. I have a radio program called in Uganda “Program ya byobuiliimi” that transmits across the country; I give agricultural advice for small farmers. They also contact me for help, and I give them my answers based on everything that I’ve learned in my first year. Some people even think that I’ve already graduated! They pay my mother for my work and I let her keep all of it.

I feel like I am where I was destined to be, in my heart I just want to thank EARTH University for all that I have learned.”

Fatumah Birungi (‘17, Uganda) The MasterCard Foundation Scholar
25th Anniversary Campaign
In 2014, the EARTH Board of Directors voted to increase the 25th Anniversary Campaign goal from $75 million to $90 million. Consequently, the EARTH Board Challenge was created by an anonymous board member who offered to give $1,000,000 if all board members committed a collective $1,000,000 in new monies. The goal was surpassed by 22% and completed on December 31, 2014.

At the end of 2014, gifts and pledges to the 25th Anniversary Campaign total $75.5 million, leaving a balance of $14.5 million to be raised in 2015.

EARTH is deeply grateful to the hundreds of donors across the globe who share our excitement about the true impact of an EARTH education.

EARTH University Operational Budget
2014 Financial Results (in thousands of dollars)

INCOME
Tuition payments and scholarship donations $7,104.8
Other income (special projects, commercial activities, other donations) $4,442.5
EARTH Endowment $6,317.8

$17,865.1

EXPENSES
Compensation and benefits for administrative and operational personnel $6,296.6
Compensation and benefits for faculty and senior administrative staff $4,481.6
Operational expenses $4,391.1
Equipment investment and replacement $827.6
Contingencies $17.9
Fundraising $1,850.3

$17,865.1

The trust and partnership we receive from our internship sponsors across the globe makes it possible for every third-year EARTH student to gain invaluable work and life experience through a 15-week professional internship in the field of their choice.
Student Kevaughn Bonner ('15, Jamaica) is from the rural farming community of Ritches in Clarendon Parrish. Last year, he completed his 15-week internship at Allied Farms, an organic project located in his native Jamaica that is run by fellow EARTH graduate Luis Rojas Corrales ('11, Costa Rica). Responsible for a wide variety of projects that included hydroponic systems optimization, plant nursery management and geographic referencing, Kevaughn collaborated with local farmers to meet his goals. “Every day I worked with my fellow Jamaicans and they are wonderful people, but there are always challenges in sharing new ideas and getting people to accept them.” He adds, “The whole community development aspect at EARTH helps you to be patient, tolerant and teaches you how to explain complicated, technical knowledge in a way that anybody can understand it. It teaches you how to be creative and use what you already have to get something done. It really helped me a lot.” After graduation, Kevaughn plans to return home and “Implement my own business in my community to create some new jobs, perhaps in horticulture or commercial aquaponics. I want to see how much of a difference I can make in my country.”
We recognize and appreciate the generous support of the following donors whose gifts were received from January 1-December 31, 2014. These individuals, businesses, foundations, governments and international organizations make the continued fulfillment of our mission possible.

Richard and Sue Vander Veen have been loyal supporters of EARTH since 1991 and in April of 2014 they brought their entire family (including grandchildren!) to visit our tropical campus in Costa Rica. “The whole EARTH model is so right for this troubled world, it is a shining beacon of intelligence and kindness,” comments Sue. Rich goes on to say, “EARTH is my favorite project. Every time I come back, it reminds me that this is the best place, that this is where we want to be helpful.”

The Impact of Your Gift in 2014

For our students
Your generosity made it possible for EARTH to provide scholarships for outstanding students from underserved communities, supply cutting-edge technology for all of our classrooms and laboratories and increase our multicultural awareness and campus integration projects.

For our faculty
With your support, the University was able to recruit and retain talented new faculty and staff while offering them competitive compensation and access to ongoing professional development opportunities.

In our curriculum
Your gift in 2014 allowed us to maintain and expand our essential programs, including: the Entrepreneurial Projects Program, the Community Development Program, the Peri-Urban Garden Module, the Integrated Organic Farm and EARTH-La Flor.

On our campus
Gifts to EARTH made it possible for us to keep the lights on, computers humming and banana trains running all day long, in addition to maintaining the roads, bridges and infrastructure on our two expansive campuses.

OTHER WAYS YOU CAN SUPPORT EARTH:

• Purchase EARTH products at Whole Foods Market.
• Learn at EARTH. We offer a wide range of short-term courses and training programs, as well as educational tourism packages for youth and adults alike.
• Be an active part of our online community and share our posts.
• Tell your friends about how EARTH is changing lives, one leader at a time.
